

Server Default page

If you see this page it means:

1. hosting for this domain is not configured
- or
2. there's no such domain registered in Plesk

What you can do:

- Using Plesk, you can create domains with web hosting on a single physical server.
- Also you can use Plesk with [Virtuozzo](#) and create isolated domains. Using a number of virtual servers with Plesk on a single machine allows for flexible management of your server's resources.
